

## Classic Picture Lights

Besselink & Jones workshops have a wealth of experience and expertise producing classic picture lights and are proud to continue the tradition of outstanding British workmanship with our range of fine art lighting. Picture and library lights use standard candle bulbs or LED-linear, spot or candle bulbs for fine art lighting applications that require a low UV and low heat light source. All of our lights can be wired for the United Kingdom, North America or Europe as standard, we can amend designs such as backplate size and cowl length. Available in brass, bronzes, nickels and chromes; picture lights can be made either wall-mounted or frame-mounted and to your specifications.

Code: W2-012 6.5" Picture light, distressed brass  
Cowl: 6.5"/17cm (length) x 2"/5cm (dia.)

warm white, low heat, low UV 12V external transformer.

Besselink & Jones have a strong heritage of traditional British engineering skills. Our well-established west London workshop has been expertly converting ceramics and other decorative treasures into unique lamps for more than fifty years. We continue to take great pride in our work specialising in brass-turning, crafting in bronze, metal plating, wood-carving, hand-painting and colour-matching. Whichever technique we are using, we understand that there are no short-cuts when it comes to producing well engineered lighting pieces of the highest quality.
